1. Introduction

Assignment

Gristwood & Toms has been instructed by Alton Town Council to carry out a survey of Public Gardens, Westbrooke Road, Alton, Hampshire, GU34 1JL. Where appropriate, I am to make recommendations on the immediate and future management in the interest of safety.

2. Documents and Information Provided

No documents or information were provided.

3. Scope of This Report

This report solely relates to the trees that Ian Lightfoot surveyed on 18th October 2021.

4. Limitations of Use

The content and format of this report are for the exclusive use of the addressee in dealing with this site. It may not be sold, lent, hired out or divulged to any third party not directly involved in this site without the written consent of Gristwood & Toms.

5. Site Visit Observations

An unaccompanied site visit of Public Gardens, Westbrooke Road, Alton, Hampshire, GU34 1JL was carried out by Ian Lightfoot on 18th October 2021. The trees were inspected using the visual tree assessment method described by Mattheck and Breloer (*The Body Language of Trees*, DOE booklet Research for Amenity Trees No. 4. 1994). All observations were from ground level without detailed investigations. All dimensions were estimated unless otherwise indicated. The weather at the time of the survey was overcast and mild with good visibility.

6. Identification and Location of Trees

The survey schedule lists the species, based on visual observation, giving the scientific and common names of the tree. The tree survey schedule is included in the appendices of this report.

7. Observations

There were **122 features** in total inspected on the site. Of the 122 features inspected, **120 features** were individual trees and **2 features** were identified as tree groups.

Of the **120 individual trees** inspected on the site, **115 trees** were identified to be in a fair condition. **4 trees** were identified to be in a poor condition. **1 tree** was identified to be dead.

Of the **2 tree groups** inspected on the site, **2 tree groups** were identified to be in a fair condition.

8. Works Priority

Urgent – Public Safety

Works are urgently required to make safe a tree that has been identified as dead/structurally unsound and is putting public safety at risk.

These works are recommended to be completed within **3 months**.

Essential

Works may be required for the following reasons:

To keep the highways infrastructure (e.g. street lights and road signs) clear of obstructions and maintain sight lines for vehicles or pedestrians.

To abate an actionable nuisance (e.g. branches damaging windows and gutters).

When an inspection has identified visible decay, fungal brackets or other structural defects.

To reduce a significant overhang of tree branches into an adjacent property.

When previous maintenance regimes have determined that future works are of the same specification for that specimen (e.g. pollarding and crown reduction).

These works are recommended to be completed within **18 months**.

Desirable

Works may be carried out on a cyclic pruning regime to provide long term health and safety benefits to the tree.

These works are recommended to be completed within **36 months**.

No Action Required

Where a tree's health and condition indicate no works are required at the time of inspection.

The presence of any defect will increase the chances of failure. Each species has its own profile of defects. Some factors that must be considered include the species growth habit, tree condition, branch attachments, resistance to decay, condition of anchoring roots, cultural or maintenance history and previous damage.

Failure Potential	Urgent – Public Safety	Essential	Desirable	No Action Required
Works Within 3 Months	1			
Works Within 18 Months		39		
Works Within 36 Months			0	
No Action Required				82

9. Recommendations

Recommendations have been made for tree works in line with sound arboricultural management and it is recommended that the works are undertaken within the suggested timescales.

There is **1 tree** identified that requires **Urgent – Public Safety** tree work. It is recommended that the works should be completed within the next **3 months**.

There are **39 trees** identified that require **Essential** tree work. It is recommended that the works should be completed within the next **18 months**.

There are **3 trees** identified that require **Desirable** tree work. It is recommended that the works should be completed within the next **36 months**.

There are **39 trees and 2 tree groups** identified as **No Action Required**.

All recommended tree works are to be carried out in accordance with BS 3998: 2010 – Tree Work Recommendations.

10. Future Considerations

When the recommended tree work has been carried out, it is suggested that a maintenance regime is introduced so that the subject trees are managed on a **3-yearly cycle**.

11. Other Considerations

Trees subject to statutory controls

If any trees are covered by a Tree Preservation Order or located in a conservation area it will be necessary to consult the local authority before any tree work can be carried out. The works specified above are necessary for reasonable management and should be acceptable to the local authority.
