○ SURVEY LAYOUT —

○ SURVEY NOTES —

Any errors or discrepancies must be notified to Rigour Survey immediately. The survey control staked is to be used for geomatic land & measured surveys at the staked scale.

Survey control must be checked and verified prior to use.

Dimensions are in metres & the plotting scale indicates the accuracy of the digital data.

Average canopy spreads & trunk diameters have been established for all major British distributions and habitats measured. 60mm can spread on a mild

tees, with descriptions and height estimates. Please use this as a guide only.

Contours on steep banks have been removed for presentation purposes. These are represented using slope symbols.

Supplemented Ordnance Survey data is included for contextual and quality control principles. This data is presented on layer 0-OS-DATA.

© Rigour Survey hold the license & copyright to all geospatial data within this document and their content cannot be shared or be used without the

data other than for the purpose supplied.

Do not scale from this drawing.

The contours shown within the pond are inclusive of the hard bed. Contour

within the pond for the top of silt levels are on a separate layer and have been turned off for presentation purposes.

The top of silt levels shown are an interpolated grid produced from a DTM calculated from using sonarite ROV and GNSS readings

○ GRID & LEVEL —

Ordnance Survey national grid coordinates & level have been determined for the network of survey control using global navigation satellite system

The mouse used in colonization is an old mouse with a peak factor of 4,000.

The survey grid's orientation is to grid north with a scale factor of 1.000.
